Rethinking professorial careers at universities of applied sciences

With its project „Rethinking Professorship Careers at Universities of Applied Sciences - Collaboration and Networking“, TH Köln would like to recruit excellent personnel for professorships and wants to achieve a better transmission between science and practice. In the end more applicants should be interested in HAW professorships.

Early entry into an academic career, e.g. as a student or academic assistant is crucial for planning a career as a professor. This is where the measure „Working@TH Cologne - Experience Science“ in the sub-project „Improving Recruitment“ comes into play:

In order to raise awareness of a career in scholarship and research as early as possible, students interested in a scientific career should be matched with professors of TH Köln by means of student assistant contracts to support them in teaching and research activities and to gain insights into the career profile of a HAW professorship.

Objectives and benefit

For students

- gain insights into the academic world and research projects as well as the job description of an HAW professorship
- be supported in the competence development with regard to scientific work
- gain a better knowledge of university-specific framework and working conditions
- develop strategies for a possible scientific career

For professors

- strengthen junior staff and set impulses for development
- receive support for research project and teaching activities
- recognize and promote individual talents and become personnel developers
- be a professional role model for academic career planning

General conditions

Financing

This measure will receive financing from the Federal Ministry of Education and Research (BMBF) funding line if the above-mentioned criteria are fulfilled. The Career Service can advise you on the application process.

Period

»Working@TH Köln – Experience Academia« is a temporary learning arrangement in combination with a job for professors for the duration of three to five months with up to 15 hours per week.

Selection of the participants

The program primarily addresses diverse students who have no previous experience in a student assistant job. Students are informed and recruited by the Career Service. In parallel, interested professors are approached and matched with students.

Job Profile

Activities supporting the supervising teacher in research projects and in the preparation of courses are encouraged.

Support and advice at the Career Service

The Career Service offers lectures and workshops on application and career planning as well as personal advice.

Registration

For professors

Are you interested in supporting students on their career paths? At the same time, are you looking for support for your research project or teaching area?

For students

You are at least in the 3rd semester of your studies and would like to learn more about career opportunities in science through a qualified student assistant job?
